SDG2: ZERO HUNGER

Description

Sri Sri University ensures sustainable and responsible **food procurement** by sourcing raw materials from local farmers, food processors, and its own university farmlands. The Faculty of Agriculture manages **40 acres of agricultural land**, where a diverse range of **fruits, vegetables, green leafy vegetables, and cereal crops** are cultivated by different departments. Most of these crops are grown using **organic and environmentally sustainable agricultural practices**, supporting both ecological balance and community health.

In addition to crop production, the Faculty's **Apiculture Unit** and **Mushroom Production Unit** contribute significantly to the availability and purchase of fresh local food. The University also operates a profitable **cow farm**, maintaining indigenous desi breeds (Plate 1) under organic management practices. Milk produced on the farm is supplied directly to the university's main kitchen, where it is used to prepare a variety of nutritious dishes and beverages.

Any additional ingredients required for food preparation are **purchased from nearby farmers and local food processors**, reinforcing the University's commitment to local economies, sustainable food systems, and community-driven development.

Summary

Sri Sri University sustainably sources its food materials from local farmers, nearby food processors, and its own organically managed 40 acres of farmland. The Agriculture Faculty grows a variety of crops and operates apiculture, mushroom production, and an organic cow farm that supplies fresh milk to the campus kitchen. Any additional ingredients needed for food preparation are purchased locally, supporting community livelihoods and promoting a sustainable food system.
